Ecopia EP422

Fuel Saver Sidewall Compound

Helps lower rolling resistance by both returning more energy back to the tire and reducing heat generation as compared to a traditional sidewall

Recycled Ground Rubber

Made from ground-up post consumer tires, it contributes to 5% of the tread compound

NanoPro-Tech

Improves rolling resistance and contributes to fuel-efficiency and CO2 reduction by controlling the interaction between polymer, filler materials and other rubber chemicals at the molecular level

Silica

Improves traction in wet conditions by increasing flexibility of tread compound

Circumferential Grooves

Help channel water out of the footprint area to improve resistance to hydroplaning
